ABOUT US

TreeQ Power is a UAE-based Engineering, Inspection & Verification, Asset Integrity, Risk-Based Inspection (RBI), and Electromechanical Services company, backed by more than 20 years of combined industry experience across the Oil & Gas, Energy, Power, Petrochemical, and Industrial sectors

We are supported by a team of internationally qualified and certified technical professionals with extensive field and project experience, delivering reliable, technically sound, and value-driven solutions in accordance with applicable industry standards and client requirements.

Our detailed services, technical capabilities, and areas of expertise are presented in the following sections of this company profile.

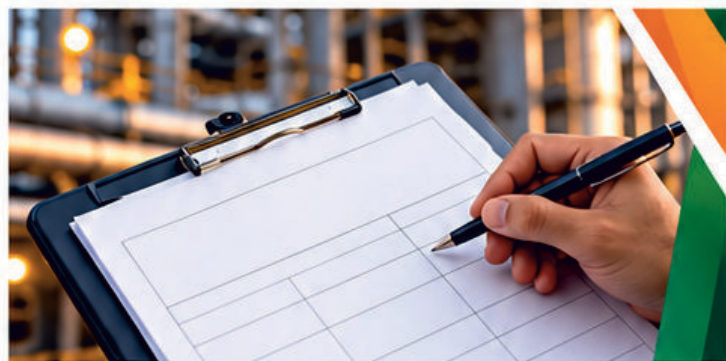

OUR CORE SERVICES

INSPECTION, VERIFICATION & PROJECT SERVICES

01 Independent Inspection Services

Safety-focused third-party inspection, testing and witnessing to ensure conformance with client specifications and applicable codes and standards.

02 Expediting

On-time and effective expediting support from early stages to delivery, to ensure project schedules are achieved through systematic management and close follow-up with manufacturers and suppliers.

OUR CORE SERVICES

INSPECTION, VERIFICATION & PROJECT SERVICES

03 Vendor Assessment

Audit and assessment services to evaluate manufacturers and sub-suppliers for capacity, quality systems and compliance with client and project requirements.

04 Provision of Projects & Shut Down Resources

Provide skilled and experienced project resources to support inspection, quality assurance, supervision and project execution activities..

05 Management System Audit

Audit of quality, health, safety and environmental management systems to verify implementation and continual improvement in line with project and international standards..

06 Project QA-QC Management

Project-focused QA/QC management to plan, implement and monitor inspection, testing and documentation activities in accordance with client specifications and applicable codes.

07 Pre-Shipment Inspection

Inspection and witnessing at supplier premises prior to shipment to ensure compliance with purchase specifications and project requirements..

08 Design Review

Technical review of design, engineering documents and calculations to ensure compliance with project specifications and recognized international standards.

09 Utility Equipment Inspection

Inspection of static and rotating, equipment, pressure systems, piping, tanks and associated utilities to ensure integrity, reliability and safe operation.

10 Flange Management Inspection

Inspection, verification and management of flanged connections to ensure integrity, compliance with applicable standards and safe operation..

11 Plant Asset Verification

Verification of plant assets to ensure accuracy, integrity and compliance with client requirements.

ELECTRICAL & AUTOMATION

We provide end-to-end Electrical & Automation services covering design, engineering, manufacturing, assembly, supply, installation, testing, commissioning and maintenance. Our expertise includes electrical systems, control and automation, electrical panels, instrumentation and related industrial solutions.

ELECTROMECHANICAL SOLUTIONS

- MV & LV Switchgear (VCBs & ACBs)
- Busducts and Transformers
- LV Panels & Capacitor Banks
- ATS & Synchronizing Panels
- Generator AMC, Battery & UPS

AUTOMATION & CONTROL

- Automation (PLC, SCADA) Panels
- VFD & Soft Starter Panels
- MCC & HVAC Control Panels

POWER SYSTEM STUDIES & SOFTWARE EXPERTISE

- Load Flow | Short Circuit | Relay Coordination | Arc Flash | Harmonics | Grid Compliance | Motor Acceleration
- Automation (PLC, SCADA) Panels

ENGINEERING SERVICES

- MEP Services & AMC
- Power Quality & Harmonic Study
- Thermography & Earth Pit Testing

TESTING & MAINTENANCE

- Cable Fault Locating & Repairing
- Cable Laying & Termination
- Pumps Supply & Repairing
- Motor Rewinding & Testing

ASSET INTEGRITY | RBI | CRAS

Integrated risk and corrosion management for safer, reliable and execution-ready assets.

1

1 RBI – RISK BASED INSPECTION

Focus inspection where risk is highest.

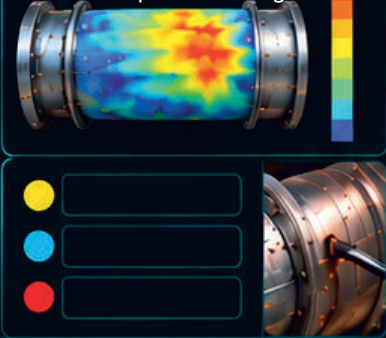

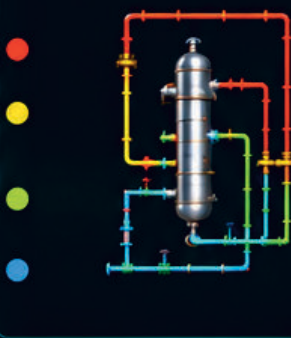

RBI – API RP 580 / 581

- Risk assessment
- Inspection planning
- Risk mitigation
- Optimized inspection intervals

2

2 CRAS – CORROSION RISK ASSESSMENT

Understand corrosion threats and prioritize mitigation

CRAS – CORROSION RISK ASSESSMENT

- Corrosion mechanism assessment
- Risk evaluation
- Remaining life estimation
- Mitigation strategies

FFS | NII ASSESSMENT

Inspection evidence and engineering assessment for safe operating, monitoring, repair, rerating or replacement decisions.

3

3 RBI – API RP 580 / 581

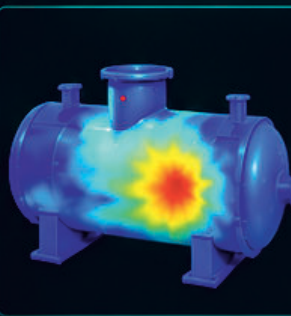

NII – NON-INTRUSIVE INSPECTION

- Inspect without opening
- Advanced inspection techniques
- Equipment condition evaluation
- Identification of potential issues

4

4 RBI – API RP 580 / 581

FFS – FITNESS-FOR-SERVICE

- In-service equipment assessment
- Defect and damage evaluation
- Remaining life assessment
- Repair / replacement recommendations
